SPRING 2020

Definition:

A WIREDIET is basically a re-configuration of your OEM Ford Mustang wiring developed in the late 90's by Roger Stine for use originally in Factory Five Racing kit cars but is also applicable to any Coyote 5.0, 4.6 or early 5.0 transplant Hot Rod Project. The purpose being to retain all essential circuits and wires while dieting (eliminating) the rest for a nice clean installation in your project.

COMING SOON - Website being updated to bring everything into 2021.
